MEMORANDUM FOR:

[REDACTED]
Deputy Director for Applications/ODP

STAT

FROM:

[REDACTED]
Information Handling Systems Architect/DDA

STAT

SUBJECT:

Review of Logistics Integrated Management
System (LIMS) Functional Requirements
Document

REFERENCE:

LIMS Functional Requirements Document
(FRD-C34-1), ODP-82-7468, dated
29 September 1982, Secret

1. We have reviewed the reference document and were particularly impressed. It is a thorough documentation of the system functional requirement, clearly reflecting a highly professional system development process. It gives management a clear picture of what is wanted and confidence that there is an excellent and appropriate level of understanding of the functional requirements of the system. It is a solid basis upon which to define the top-level system architecture in the next phase, such as in terms of CPCI's and CPC's.

2. The application of the data flow diagram technique, we believe, was a major factor in developing that thorough understanding of the system requirements. It was particularly impressive since it was understood to be applied at the initiation of the LIMS development team. Additionally, the application of a data dictionary to report and document the correlation of data and functions was very effective.

STAT

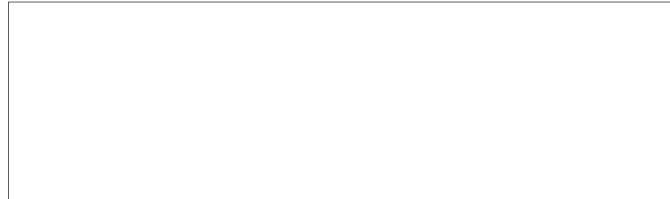

3. We believe the LIMS development team lead by [REDACTED] be commended for their highly professional work. We hope to see some of these tools exploited on other projects.
